

Early Maturity

80 - 92 Days to Soft Dough

Management & Positioning

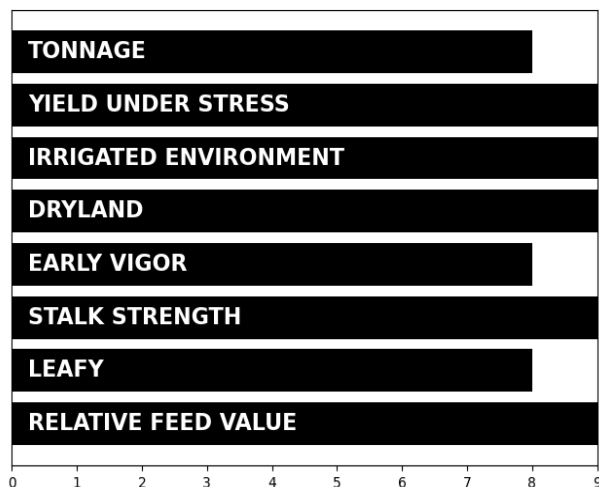

- Short season BMR forage with great yields on dryland or irrigated
- Short statured with very good standability and dry stalks for quick drydown
- Early season that can yield with fuller season forage hybrids in most situations
- Due to early maturity, provides options for high quality forage where fuller season won't mature
- This hybrids performs well under dryland conditions with excellent heat and stress tolerance
- BMR-6 provides excellent nutrition and feed values
- Averages 13-15,000 seeds/lb. Tested as FX18152 BMR

Precision Placement™ Management

Seeding Rates (lbs./acre)

Low rainfall on rows	6-9 lbs
Low rainfall on drilled	12-18 lbs
Dryland on rows	10-14 lbs
High rainfall / irrigated on drilled	15-25 lbs

Agronomic Ratings

Agronomic Traits

Silage	9	Early Vigor	8
Tonnage	9	Standability	Excellent
Green Chop	9	Harvest	at Dough Stage
Photoperiod sensitive	No	Drought Tolerance	Excellent
Protein	Excellent	Heat Tolerance	Excellent
Plant Height	Med-Short		

Disease / Insect Tolerance

Downy Mildew (Pathotype 1)	5
Downy Mildew (Pathotype 2)	n/a
Anthraco nose	6
Fusarium Rot	n/a
Green Bug Resistance	5
Sugarcane Aphid	n/a
