

Management & Positioning

- Excellent multi-use summer forage for grazing, green chop or hay
- Excellent tolerance for SCA
- Fast recovery after grazing or mowing
- Well adapted for all areas where Sudangrass or Sorghum Sudan hybrids are current grown
- Tolerant to marginal soils, including acid or sandy
- Drought tolerant
- No threat for prussic acid poisoning or sorghum cystitis if fed to horses

Precision Placement™ Management

Row Width		Soils	
Wide		Silt Loams	
15-20"		Sandy	
Drilled		Clay	
Seeding Depth		Poorly Drained	
Shallow	½ - ¾ "	Temp at Seeding	70° F
Planting Populations (lb/ac)		Yield Environment	
Low Moisture	3.5 - 5.0	High	HR
Low Moisture Drilled	10.0 – 15.0	Moderate	HR
High Moisture	5.0 – 10.0	Stress	HR
High Moisture Drilled	15.0 – 20.0		
Tillage:		Water Management	
Conventional		Full Irrigation	
Minimum		Limited Irrigation	
Ridge-Till		Dryland below 21"	
No-Till			

Agronomic Ratings

Agronomic Traits

Leaf to Stem Ratio	H	Leaves & Stems	Smooth
Protein Content	H	Foliage	Dense
Stem Diameter	L	Stature	Bushy
Leaves & Stems	Smooth	Drought Tolerance	H
Early Vigor	H	Heat Tolerance	H
Standability			
Late Planting / Cool Weather Response		Average Seeds/lbs. (thousands)	40 - 70
